

Recommend that the 60 meter band be divided into two sub bands. The lower for narrow modes being 50 KHz wide. The balance of the band for all modes authorized at these frequencies. The power limit should be 1500 watts. I would restrict the band to Amateur Extra class only. This restriction would encourage General Class licensees to upgrade to Amateur Extra. As the chair of the Question Pool Committee, I do not feel that upgrading is too onerous a requirement for this additional band. Given the potential for interfering with other services, this requirement would minimize the potential for interference.
